REPLANT™

Replant is an ultra-premium, high performance material that revolutionizes the way we think about agricultural waste.

BENEFITS OF AGRO-WASTE

---

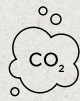

Replant is a fully customizable, highly tactile luxury material that can be used for almost anything, from fashion to furniture to sports.

The fibers used to make Replant are sourced directly from farms where there is an abundance of plant waste left on the ground after harvesting. The waste would otherwise be burned, releasing CO<sub>2</sub> into the air and toxins into the soil.
